## MATH 7A Test 4 - SAMPLE

This test is in two parts. On part one, you may not use a calculator; on part two, a (non-graphing) calculator is necessary. When you complete part one, you turn it in and get part two. Once you have turned in part one, you may not go back to it. You will show all work on the test paper, no scratch paper is allowed.

## PART ONE - NO CALCULATORS ALLOWED

(1) Find each of the following exactly. If is a trig value we cannot compute exactly, write "can't find exactly value":
(a) $\cos \left(330^{\circ}\right)=$ $\qquad$
(b) $\sin (-\pi / 2)=$ $\qquad$
(c) $\tan (3 \pi / 2)=$ $\qquad$ (d) $\tan \left(120^{\circ}\right)=$ $\qquad$
(e) $\tan \left(160^{\circ}\right)=$ $\qquad$ (f) $\csc (3 \pi / 4)=$ $\qquad$
$(\mathrm{g}) \cos (7 \pi / 6)=$ $\qquad$ (h) $\sec \left(225^{\circ}\right)=$ $\qquad$
(i) $\sin \left(-120^{\circ}\right)=$ $\qquad$
(j) $\tan (-\pi / 3)=$ $\qquad$
(k) $\cos \left(180^{\circ}\right)=$ $\qquad$ (I) $\sin (\pi / 8)=$ $\qquad$
(m) $\tan \left(-\frac{\pi}{2}\right)=$ $\qquad$ (n) $\cos \left(315^{\circ}\right)=$ $\qquad$
(o) $\sin (1)=$ $\qquad$
(p) $\cot \left(\frac{\pi}{3}\right)=$ $\qquad$
(q) $\cos \left(\frac{4 \pi}{3}\right)=$ $\qquad$ (r) $\cos \left(390^{\circ}\right)=$ $\qquad$
(s) $\sin \left(-150^{\circ}\right)=$ $\qquad$
(t) $\csc \left(-\frac{\pi}{4}\right)=$ $\qquad$
(3) Use the figure to $\cos 1$ ___-_-_-_-_ and $\sin 5.5$ $\qquad$
(a) approximate the value of $\qquad$
(b) find a value of $t$ such that $\sin t \approx-0.2$ $\qquad$
(c) find a value of $t$ such that cost $\approx 0.6$ $\qquad$

NAME:

## MATH 7A Test A sample

PART TWO - CALCULATORS ALLOWED (non-graphing)
Show your work on this paper. EXACT answers are expected unless otherwise specified. Show scales on graphs. Give units in answers when appropriate.
Fill in the blanks.
(1) $f(t)=\sin (t)$ Is even, odd, or neither $\qquad$
(2) Convert to degrees (exactly) $7 \pi / 9$ radians $\qquad$
(3) What is the length of the arc that subtends a central angle of $45^{\circ}$ in a circle of radius 8 inches? $\qquad$
(4) In which quadrant(s), if any, is $\sin \theta<0$ and $\cos \theta>0$ $\qquad$
(5) Convert to radians (exactly) $100^{\circ}$ -
(6) Using your calculator, find approximations for the following, correct to 3 decimal places.
(a) $\sec 22^{\circ} \approx$ $\qquad$ (b) $\tan (-\pi / 7) \approx$ $\qquad$
(c) $\frac{2 \cos 60^{\circ}}{\sin 10^{\circ}+7} \approx$
(d) $\cos 2 \approx$ $\qquad$
(7) Given the following figures, find:

(a) $\cos \theta=$

(b) $\sin \theta=$

(c) $\cot \theta=$
$\qquad$
(8) A ferris wheel at the carnival has a radius of 30 feet. You measure the time it takes for one revolution to be 70 seconds. Find the following exactly. Show correct units.
a) what is the angular speed?
b) what is the linear speed?
c) what is the linear speed in miles per hour? (Find exact value, then calculate an approximate answer using your calculator.
(9) For each of the following angles, find the quadrant and reference angle. Answer exactly, in the units given.

| ANGLE | QUADRANT | REFERENCE ANGLE |
| :--- | :--- | :--- |

a) $390^{\circ}$
b) $-210^{\circ}$
d) $7 \pi / 6$
e) $19 \pi / 10$
g) 2.5
(10) Find 4 angles, one in each quadrant, having the given angle as a reference angle.
$2 \pi / 9$
(11) Name four " $\pi / 6$-type" angles, as defined in class.
(12) Find 2 angles coterminal with the given angle, one positive, one negative. (Answer in the units given)
(a) $170^{\circ}$
(b) $23 \pi / 12$ $\qquad$
(13) Find the missing coordinate of $P$ (___-_-, 1/7) using the fact that $P$ lies on the unit circle in the second quadrant.
(14) Find the terminal point $P(x, y)$ on the unit circle determined by $t=\frac{5 \pi}{4}$.
(15) Given $\cos \theta=\frac{-1}{3}$ and $\theta$ is in Quadrant III, find:
(a) $\sin \theta=$ $\qquad$ (b) $\tan \theta$ $\qquad$
(16) Given $\tan \theta=-4$ and $\cos \theta<0$ find:
(a) $\sin \theta=$ $\qquad$ (b) $\cot \theta$
$\qquad$
(17) Given the following right triangle, find $\cos \alpha, \tan \theta$ exactly

$\cos \alpha=$ $\qquad$ $\tan \theta=$ $\qquad$
(18) A helicopter hovers 400 feet above a river. The angle of depression from the helicopter to the west bank is $73^{\circ}$, while the angle of depression from the helicopter to the east bank is $44^{\circ}$. (Remember, angle of depression is measured from the line of sight to the horizontal). Find the width of the river (exact and approximate.)

(19) Find the length of the arc and the area of the sector corresponding to a central angle of 120 degrees and radius 2 inches..

(20) Sketch the following graphs. (clearly show scale, graph at least two periods, clearly show locations of asymptotes)
(a) $g(x)=\tan (4 x)$

(b) $f(x)=2-\sin \pi x$ (clearly show scale, graph at least one period, label coordinates of highs and lows)

(c) $f(x)=3 \cos \left(\frac{\pi}{4} x-\frac{\pi}{4}\right)$

(d) $f(x)=\sec \left(\frac{1}{2} x\right)$

(22) Consider a ball that is bouncing up and down on the end of a spring in simple harmonic motion. Suppose that 4 inches is the maximum distance the ball moves vertically upward or downward from its equilibrium position. Suppose also that the time it takes for the ball to complete one cycle is 6 seconds. Find an equation for the motion of the ball in each of the cases below.
(6 points)
a) The ball starts at rest at $t=0$ and is pushed downward as $t$ increases.
b) The ball is pushed upward to its maximum displacement above equilibrium and is let go at time $t=0$.
(23) If a tower is viewed from the top of a 50 foot building, the angle of elevation to the top of the tower is $59^{\circ}$. If viewed from the ground floor of the same building, the angle of elevation to the top of the tower is $62^{\circ}$. Find the height of the tower. (Show an exact answer and an approximate.)
